TRANSPORT SOLUTIONS THROUGH DESIGN GENERATOR SETS

THE NEW CANOPY DESIGN MODEL 145-165 KVA FOR THE GENERATOR SETS RENTAL RANGE HITS THE MARKET

INMESOL's Technical Department has developed a new 145-165 KVA canopy for generator sets models IIRN-145, IIRN-165, IVRN-145, and IVRN-165.

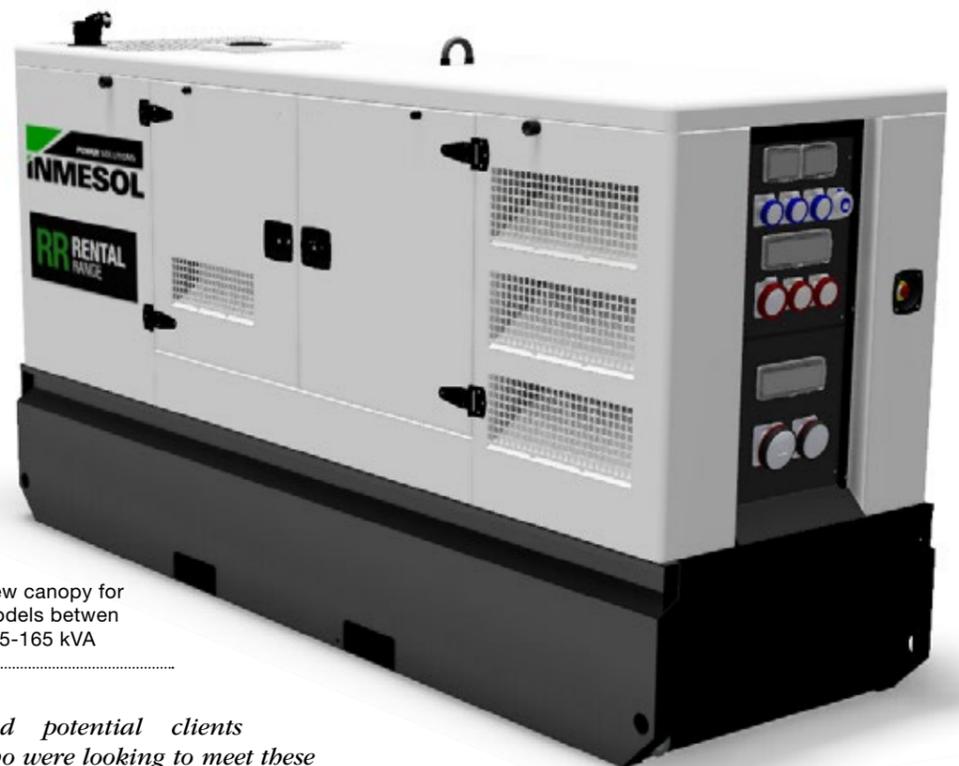

It features a smaller design, while retaining all the qualities in terms of features and noise emissions as satisfactory as those of its predecessor.

These generator set models were usually assembled in a canopy with the following dimensions: 3640mm x 1380mm x 2145 mm.

Its new dimensions 3525mm x 1140mm x 1950mm are ideal to take full advantage of both maritime and land load combinations.

The picture above shows how a 40-foot low-bed trailer truck can transport up to six units thanks to the subtle reduction of the canopy's width.

Very pleased with the results, Antonio Mármol, head of the Rental Commercial Dept. in Europe, states that: "This new design will benefit many renters who must transport several generator sets constantly from one place to another, and will be very welcomed by clients

New canopy for models between 145-165 kVA

and potential clients who were looking to meet these kinds of needs, and whose suggestions I collected at BAUMA 2016."

ENVIRONMENT

Once again, we have developed a design to minimize the need for transport

and, thus, fuel consumption and emissions. A new design aligned with INMESOL's philosophy, always focused on achieving the best economy, the highest efficiency, and to reduce the impact on the environment.

THE MACHINERY RENTAL SECTOR: A GROWING MARKET

The rental sector underwent a dramatic drop with the onset of the 2008 economic crisis and the slowdown of the machinery construction sector, as this is one of the main markets for renters.

Renters have not been inactive over this downturn. They understood that relying only in one single market faces them with a very risky economic situation.

What to do to change this situation and start to grow?

Diversify

Start to focus on new market niches: Companies that organise shows, events, and promotions, food and beverages companies, catering and hospitality services, etc. and any kind of company that generally needs to ensure their power supply at very specific and precise times.

Expand Your Services

Existing rental companies not only rent their machines but they also offer optimal solutions to meet each of their clients' needs, providing a comprehensive professional service.

Ensure a Fleet of Technological Equipment that is Sustainable and Features the Latest Safety Developments.

The different and possible rental equipment requirements demand for robust and compact machines, with low levels of noise and gas emissions, large access points for easy maintenance tasks, and, above all, protection elements that ensure safe handling from both the operation and usability standpoints, as these equipment is frequently changing locations.

All these factors have been considered in the design of INMESOL Rental Range generator sets.

Join Associations

People always say there is "strength in numbers," and we couldn't agree more with this statement.

Renters, as well as rental equipment manufacturers, have found the perfect formula to boost the sector together in associations such as ERA (European Rental Association) or ASEAMAC (Spanish Association of Machinery Renters) by encouraging professionalism and promoting the advantages of the rental business model, which is achieving excellent results.

Rental Range Generator Sets

In 2016, up to date, Inmesol has experienced approximately a 25% increase in sales of rental generator sets, compared to the same period of 2015.

SPANISH ASSOCIATION OF MACHINERY RENTAL COMPANIES

ASEAMAC
Asociación Española de Alquiladores de Maquinaria

POWER GENERATORS
INMESOL

It is the main Association supporting companies within the machinery rental sector at a national level.

Its objectives are focused in fostering a professional approach towards the rental services which is constantly growing, as well as in promoting the advantages of the rental model.

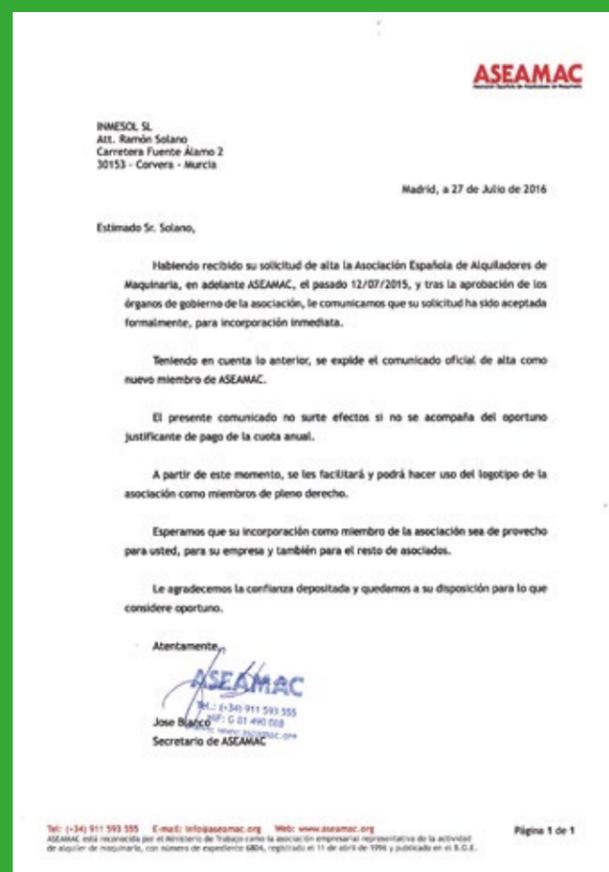

Partners to this association include Rental Companies, Machinery producers, and entities or associations within the region specialized in machinery and/or equipment rental.

The Importance of Joining an Association

INMESOL, being a generator sets manufacturer in the rental sector, was bound to become a member of ASEAMAC.

There are several reasons that have driven us to join this and other business associations. To be in contact with businessmen from this sector who have the similar concerns, to be closer to rental companies to learn about their needs in depth, and to be aware of all the difficulties involved in the area. Our participation in forums, events, and fairs organized by ASEAMAC will help us be updated on all the news, regulations, technology innovations, and relevant changes in the sector.

In short, we believe that joining ASEAMAC strategically increases our competitiveness and makes it possible for us to offer professional machinery for a professional sector.

GENERATOR SET INSTALLED IN ONE OF THE TALLEST BUILDINGS AT THE PORT OF HAMBURG

INMESOL IV-110 generator set installed on the roof terrace of the business centre.

This building, just like rest of the emblematic buildings at the Port of Hamburg area, used to be an old grain silo converted into a business centre. It is 55m high with 15 floors dedicated to offices, and it even has a restaurant.

The generator will be responsible for providing electricity in case of mains failure affecting the lifts or the high pressure water pumps for the fire personnel, as well as the emergency lighting.

The port of Hamburg is the largest port in Germany, and it is amongst the 9 most important ones in the world.

It was founded in 1189 at the confluence of the Elba and Alster rivers. It has been a vital port in Europe due to its privileged location. It is one of the major ports in the world, considering the volume of containers it handles.

INMESOL IV-110 generator set being lifted to the roof terrace of the building and Port of Hamburg.

Recently, an Inmesol generator set has been installed at one of the tallest buildings located in the great German port area.

A 110 KVA LTP power emergency set, IV-110 model, with a Volvo engine, has been installed on the roof terrace of the building.

DOZENS OF INMESOL SETS ARRIVE TO LIBYA

The warehouses of our distributor in Libya, Assalam Addaem, have been stocked up after the arrival of several dozens of gensets with powers ranging from 6 to 160 KVA LTP in the portable and stand-by ranges.

Assalam Addaem is a company with an extensive experience in engines and gensets. It offers an excellent technical and post-sales support that guarantees their clients the swift maintenance and repair of the

equipment purchased due to the wide range of spare parts in stock at their facilities.
